## **DETAILED ACTION**

Claims 1-14 are pending and have been examined.

### ***Claim Rejections - 35 USC § 101***

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 8-14 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims do not require an element of hardware and are therefore software *per se*.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-14 are rejected under 35 U.S.C. 102(b) as being anticipated by **Pozzi et al.**, “Automatic Topology-Based Identification of Instruction-Set Extensions for Embedded Processors”.

Claim 1

**Pozzi** discloses a computerized method for determining a complex computer operation for a computer application, comprising the steps of:

- (a) traversing a tree of potential complex computer operations (*page 2, section 2, first paragraph*); and
- (b) pruning the tree for optimality under constraints (*page 5, right column, last paragraph to page 6*).

Claim 2

**Pozzi** discloses the method of claim 1, wherein optimality comprises maximization of a function of merit (*page 1, section 1*).

Claim 3

**Pozzi** discloses the method of claim 1, wherein the constraints comprise a convexity constraint (*page 6, figure 2*).

Claim 4

**Pozzi** discloses the method of claim 1, wherein the constraints comprise a maximum-input- multiplicity constraint (*page 2, section 2*).

Claim 5

**Pozzi** discloses the method of claim 1, wherein the constraints comprise a

maximum-output- multiplicity constraint (*page 5, right column, last paragraph to page 6*).

Claim 6

**Pozzi** discloses the method of claim 1, wherein pruning is effected when a connectivity constraint is violated (*page 5, right column, last paragraph to page 6*).

Claim 7

**Pozzi** discloses the method of claim 1, wherein pruning is effected when a connectivity constraint is violated and gain towards optimality of the maximal connected graph is bounded (*page 5, right column, last paragraph to page 6; figure 2, bounded elements*).

Claims 8-14

The limitations of claims 8-14 correspond to the limitations of claims 1-7 and are therefore rejected in a corresponding manner.
